Thermal Analysis Technical Seminar: What Can Be Seen By Using Humidity Controlled Thermal Analysis?

UPCOMING RIGAKU WEBINARS

Whether it is reducing corrosion in piping of cooling towers at power stations and, in consideration of the recent global news story, watch a video on how analytical science plays a role in predicting volcanic eruptions. Finally, read another exciting tale about how Rigaku's handheld Raman device support this goal.

The emphasis of this article resonates with Rigaku's corporate mission to "contribute to the welfare of our planet; for example, in environmental monitoring, improving recycling processes, or developing green technologies, thereby providing a benefit to society."

A common drive to "solve practical problems with real world implications" among many scientists, with many analytical applications directly related to improving the quality of life and quality of the planet.

A happy New Year to all our followers, friends and customers. We hope that 2022 brings great success to you all.

WELCOME.
