We are also sharing an informative article from the Summer 2021 issue of the materials.

Analytical Device's podcast series on the opioid crisis, along with the news about the use of the ResQ CQL handheld Raman analyzer for the characterization of a range of hazardous materials.

In this issue, we present an article on battery research and the third installment in Rigaku Analytical Devices' podcast series on the opioid crisis, along with the news about the use of the ResQ CQL handheld Raman analyzer for the characterization of a range of hazardous materials.

In a recent development, the telescope may have spotted the most distant galaxy ever seen, producing light formed a mere 300 million years after the Big Bang. In channels of dust and gas where stars are actively forming.
